## MECHANICAL ENGINEERING

## FIRST PAPER

Full Marks: 200

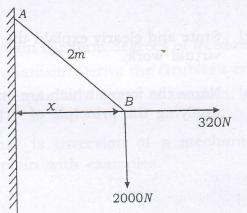

Time: 3 Hours

The figures in the margin indicate full marks for the questions.

## Group-A

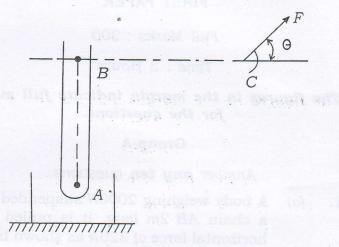

Answer any ten questions.

1. (a) A body weighing 2000N suspended with a chain AB 2m long. It is pulled by a horizontal force of 320N as shown below. Find the force in the chain and lateral displacement (ie., x) of the body.

Contd.

(b) A L-shaped body ABC is hinged at A with a force F acting at its end C. Determine the angle  $\theta$  which this force should make with the horizontal to keep the edge AB of the body vertical.

10

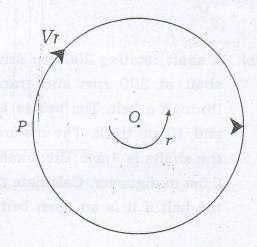

- 2. (a) State and clearly explain the principle of virtual work.
  - (b) Name the forces which are omitted while applying the principle of virtual work.

- (c) A beam AB of span 10m carries two point loads of 15kN and 20kN at 4m and 6m from the ends A respectively. Determine the beam reactions by the principle of virtual work.
- 3. (a) Write the classification of kinematic pairs.
  - (b) A shaft rotating 200 rpm drives another shaft at 300 rpm and transmits 6kW through a belt. The belt is 100mm wide and 10mm thick. The distance between the shafts is 4mm. The smaller pulley is 0.5m in diameter. Calculate the stress in the belt if it is an open belt.
- 4. (a) Explain the term degrees of freedom of a mechanism. Derive the Grubler's criteria to determine degrees of freedom. 8

9.09. Will

(b) What is inversion of a mechanism? Explain with examples.

(c) A particle P moves with a constant relative velocity  $V_r = 0.9 \, m/s$ , along the circumference of a circular disk of radius r = 0.3 m, while the disk rotates with uniform angular velocity  $w = 6 \, rad/s$  in the opposite direction. Find the absolute acceleration 'a' of the particle.

5. (a) What do you understand by the terms
Static and Dynamic balancing? Explain
why a reciprocating mass cannot be
balanced completely.

(b) The following data relate to a single cylinder reciprocating engine:

Mass of reciprocating parts = 40kg

Mass of revolving parts = 30kg at crank radius.

Speed = 150 rpm

Stroke = 350mm

If 60% of the reciprocating parts and all the revolving parts are to be balance, determine the

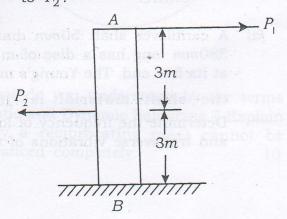

- (i) balance mass required at a radius of 320 mm.
- (ii) unbalanced force when the crank has turned 45° from the top-dead centre.
- 6. (a) A cantilever shaft 50mm diameter and 380mm long has a disc of mass 100kg at its free end. The Young's modulus for the shaft material is  $200 \, GN/m^2$ . Determine the frequency of longitudinal and transverse vibrations of the shaft.

(b) A rectangular bar is subjected to a direct stress ( $\sigma$ ) in one plane only. Prove that the normal and shear stresses on an oblique plane are given by

 $\sigma_n = \sigma \cos^2 \theta$  and  $\sigma_t = \frac{\sigma}{2} \sin 2\theta$ , where  $\theta$  = angle made by the oblique plane with the normal cross-section of the bar.  $\sigma_n$  = Normal stresses,  $\sigma_t$  = shear stresses

8

- 7. (a) State and prove Cartigliano's Theorem 10
- (b) Horizontal pulls  $P_1$  and  $P_2$  are applied to a vertical pole AB which is 4cm in diameter. If the deflection at the top of the pole is to be zero, find the ratio of  $P_1$  to  $P_2$ .

ABP/CCM-55/XIV

- 8. Stating the assumptions made in developing the Merchant's circle diagram, deduce the expressions for (i) Shear force (ii) Normal force (iii) frictional force (iv) the back-up force in terms of  $F_c$ ,  $F_t$ ,  $\phi$  and  $\alpha$ ; where these symbols have their usual meaning.  $5\times4=20$
- 9. With a neat sketch, explain the working principle of the following along with the applications:
  - (i) Electro-discharge Machining
  - (ii) Ultrasonic Machining. 10×2=20
- **10.** (a) Explain stress-strain diagram for ductile materials.
  - (b) Explain the two forming processes
    - (i) Deep drawing
    - (ii) Forging

 $5 \times 2 = 10$ 

- **11.** (a) What is high velocity forming and why is it used?
  - (b) Describe with neat sketches, the different types of techniques of explosive forming.

12. (a) What do you understand by the term "tool life"? What are the methods by which tool life can be assessed?

3+5=8

- (b) Explain the term "Machinability". On what factors does machinability depend. Explain the term "Machinability Index". 2+4+2=8
- (c) Explain in brief how tool life is affected by the rake angle and clearance angle.
- 13. (a) Write the concept and advantages of control charts. 5+3=8
  - (b) Write notes on:  $4\times3=12$ 
    - (i) Line balancing
    - (ii) Factors affecting good work station
    - (iii) C-chart
- 14. (a) What is the relation between Primal and Dual problem?

(b) Solve by dual simplex method the following problem: 15

Maximize 
$$Z = -3x_1 - 2x_2$$
  
Subject to  $x_1 + x_2 \ge 1$   
 $x_1 + x_2 \le 7$   
 $x_1 + 2x_2 \ge 10$   
 $x_2 \le 3$ 

15. Five wagons are available at stations A, B, C, D and E. These are required at five stations I, II, III, IV and V. The mileages between various stations are given in table below. How

 $x_1, x_2 \ge 0$ 

should the wagons be transported so as to minimize the total mileage covered?

	I	II	III	IV	V
A	10	5	9	18	11
В	13	9	6	12	14
C	3	2	4	4	5
D	18	9	12	17	15
E	11	6	14	19	10
